

Please reject NAB's petition 04-160.

As an XM satellite radio subscriber and frequent long-distance traveler, I benefit tremendously from the universal coverage and availability of weather and traffic information over my satellite radio. I gladly pay for this service and no organization should have the right to take this service away to protect their own monopoly positions.

Competition is the foundation of this great country. Let the NAB's members compete for my business rather than trying to squash the competition through regulatory fiat.
